This OEM replacement brake power supply control unit is genuine and has part numbers 89680-33010 8968033010 89680-47020 and 8968047020. ... 2006 Lexus GS430 Base 4.3L V8 - Gas; 2006 Lexus RX400h Base 3.3L V6 - Electric/Gas; Hybrid Regenerative Brake Control ...

Hi all. 2006 Prius. Brake actuator went bad 2018. Brakes still function. I drive short local trips using extreme care and ready to apply parking brake if necessary. ... but you would have to unlock the door with the key each time because there would be no 12v power supply to the central locking until the drivers door was unlocked. T1 Terry #10 ...

But you have to do that without opening the driver's door, which will awaken the brake ECU and pump the pressure back up. If you remove the fuses for the brake pump, you can zero-down the system by pumping the brake pedal (in any Prius generation except Gen 2). You'll get around twenty or thirty strokes before the pedal suddenly feels quite hard.

And that was it actually, The the four blink codes was coming from the brake power supply control module not being connected .... The brake power supply control modules job is have backup power incase 12v lead acid battery died. It is a fail safe for brakes incase it died i think. I am so stupid, end of story... Everything works now.

2006 Prius. KK6PD said: ?. OK I'll bite, whats a "brake capacitor" ... It's the black box in the back that partly blocks the 12 volt battery and has a label that (from memory) refers to brake backup power source assy, something like that. #5 cwerdna, Jun 6, 2011. northwichita ... Here is the URL for the eBay search for these things! prius ...

Prius Prime plug-out, backup power supply for house. Discussion in "Prime Main Forum (2017-2022)" started by mc510, Oct 9, ... JeffC2006 Junior Member. Joined: Apr 30, 2006 4 3 0. In my Gen 2 Prius I attached a 1500 watt inverter directly to the 12v battery. It worked great. Powered the essentials in the house for a few days using about a ...

One item that can cause a drain on the 12v battery while the car is off, is the (B18) Brake Control Power Supply. This is the black box located just to the driverside of the 12v battery. This box has 28 capacitors which store energy as a backup for the brake system in case there is a loss of main power.

brake control - brake control power supply bc-231 bc brakebrake controlbrake control power supply components brake control power supply assembly deck trim side panel assembly rh no. 1 brake ... 2006 prius repair manual - 2006 prius electrical wiring diagram created date:

(this pump sounds like a rattlesnake when the pump is running. Repeatedly press the brake pedal to force this pump to run while the Prius is READY, so you can identify when it is running.) If yes, that is an excellent indication that the brake actuator needs to be replaced and confirms that DTC C1256 and C1391 are correct.

I just picked up a 2006 Prius that the previous owner said would drain the 12v battery. I purchased a new AGM battery and installed. ... Try unplugging the brake power supply box next to the battery. #2 TMR-JWAP, Mar 2, 2021. jpkc97 likes this. ... Combo meter works, Backup camera works, now beeps when in reverse as well as beeps when leave key ...

These types of brakes work better at certain speeds than at others. In fact, they're most effective in stop-and-go driving situations. However, hybrids and fully electric cars also have friction brakes, as a kind of back-up system in situations where regenerative braking simply won't supply enough stopping power.

Find many great new & used options and get the best deals for L06128 2004-2005 Toyota Prius Brake Control Power Supply Module OEM at the best online prices at eBay! Free shipping for many products! ... item 20 2006 TOYOTA PRIUS BRAKE POWER SUPPLY COMUTER 89680-47020 2006 TOYOTA PRIUS BRAKE POWER SUPPLY COMUTER 89680-47020. \$45.00.

the normal braking on a prius feels very different from a regular car. and bleeding the system is a far different job on a prius than on a regular car- in fact it's kind of a PITA even for an experienced tech. the system is touchy. and you do need the toyota scantool to do the job, so this has to go to the dealer.

It would be a number 81, 82, 83 or 84. 83 points directly to the brake backup power supply (capacitors in the trunk next to the 12V battery). C1378 is incredibly rare, and I believe the service manual is wrong, as it states as a possible cause "malfunction in backup power supply" yet the trouble area is the skid control ECU.

Greetings and welcome to Prius Geekery! Because the 12v in a Prius doesn't power the engine starter and the HV Battery does, the criminals who bought Optima and moved the manufacturing plant to Mexico turned one of the highest rated batteries of the 1990's into total garbage and they get away with it because in Prius" case

the 12v system needs no cold ...

Plan on ~1 hour or less for the job. If you're doing this as a planned replacement you will want a backup 12v source hooked up so you don't lose settings and have to initialize systems. If your ...
