This tutorial shows step-by-step how to power the ESP32 development board with solar panels, a 18650 lithium battery and the TP4056 battery charger module. The circuit we'll build is also compatible with the ESP8266 or any microcontroller that is powered at 3.3V. When you power your ESP32 with solar panels, it may be useful to...

I'm developing a power source based on a solar panel and a battery. Basically, during night or rainy days the power comes from the battery. At sun light the power comes from the solar panel (extra power recharge the battery). During my search for a buck-boost converter (example TPS63024x) and a linear charger for the battery, I found bq2512x.
