Noise, or difficulty turning the steering wheel, may reflect a low power steering fluid level, which could be due to a leak in a pressure hose, or a leak elsewhere in the power steering system. Although a leak in the pressure hose is a possible cause of a low fluid level, a mechanic will consider all other possible causes, too.

The steering rack along with this power assist system are what allow you to easily move all that heavy mass between the steering wheel and your tires without so much as breaking a sweat.

~I""""""----"""" BLEEDING THE POWER STEERING Aerated fluid will result in noise from the power steering pump. The system should be bled anytime a power steering component has been replaced, a fluid line disconnected, or for moaning and groan-ing noises. To bleed the power steering system, most technicians just fill the reservoir and turn the wheel from lock to lock.

Bleeding the power steering system is a straightforward method to remove trapped air from the power steering pump and hydraulic lines. If the issue persists or returns after a few months, it's likely due to a leak. In such cases, it's best to have a mechanic diagnose and repair the problem. ... 39 votes - 97%. Co-authors: 6.
