Current power systems are still highly reliant on dispatchable fossil fuels to meet variable electrical demand. As fossil fuel generation is progressively replaced with intermittent and less predictable renewable energy generation to decarbonize the power system, Electrical energy storage (EES) technologies are increasingly required to address the supply ...

In this paper, a control strategy combining quasi-PR control and harmonic compensation is applied to an energy storage inverter system to achieve closed-loop control and waveform optimization of the inverter. An experimental storage inverter system for both purely resistive load and nonlinear load conditions is built to verify the correctness of the theoretical analysis and ...
