

Technical Report: Moving Beyond 4-Hour Li-Ion Batteries: Challenges and Opportunities for Long(er)-Duration Energy Storage This report is a continuation of the Storage Futures Study and explores the factors driving the transition from recent storage deployments with 4 or fewer hours to deployments of storage with greater than 4 hours.

CAES, a long-duration energy storage technology, is a key technology that can eliminate the intermittence and fluctuation in renewable energy systems used for generating electric power, which is expected to accelerate renewable energy penetration [7], [11], [12], [13], [14]. The concept of CAES is derived from the gas-turbine cycle, in which the compressor ...
