

Average savings of solar panels

How much do solar panels save?

How much you actually save depends on many factors, including your power usage, local electricity rates, the size of your system, and how your utility bills solar customers. The average 6 kW solar panel system installed anywhere in the country will save you about \$1,500 on your electricity bills annually.

Can solar panels save you money on electric bills?

When you multiply that by the national average electricity rate of \$0.14 per kWh, you'll find that the typical American family has a monthly electric bill of around \$125. This means if enough solar panels were installed to cover this electricity usage, the average household could save almost \$1,500 a year on electric bills!

Will a solar system save you money?

While you will see immediate savings on your first power bill after installing a solar system, your overall net savings will become apparent after several years of use--after the savings on your power bill have paid for the upfront costs of the panels and installation.

How much does a 6 kW solar system save?

The average 6 kW solar panel system installed anywhere in the country will save you about \$1,500 on your electricity bills annually. Solar savings are very real, but exactly how much you save depends on the availability of local, city, and state incentives.

Are solar panels a good investment?

Solar panels are an expensive initial investment but provide significant savings on energy bills over time. Depending on your area's electricity costs, you could save between \$28,000 and \$120,000 over the lifetime of your solar panel system. The higher your local electricity prices, the greater your potential for solar savings.

How much do solar panels cost?

To estimate how much you'll pay for solar, multiply the size of your system (in watts) by the average cost per watt in your area--\$2.75/W across the U.S., according to EnergySage data.
