

# Battery backup for electronics

What is a backup battery power supply?

This backup battery power supply is designed for use during outages and unsafe voltage fluctuations, and acts as a surge protector with battery backup in the event of damaging power surges and spikes. The APC Back-UPS BE600M1 is the ideal battery backup for computers and routers to keep you and your smart devices connected.

Does a UPS battery backup need to power up?

Unlike a backup generator, it does not need to power up in order to start generating power. In other words, if you experience a power outage in your area, your machinery should not shut down if it is plugged into a UPS battery backup.

What makes a good UPS battery backup?

Even if you're not prone to power outages, many UPS models also include surge protection features. An automatic voltage regulator smoothes over brownouts and spikes without needing to change your battery. It's one of several capabilities you'll want to look for in the best battery backups.

Do you need a battery backup?

One important part of your plan should be considering battery backups--also known as an uninterruptible power supply, or UPS--which will automatically take over when the power drops or goes out entirely. But no one solution's perfect for everyone.

Does a battery backup Protect Your Electronics?

A reliable battery backup protects your electronics in more ways than one. We may earn revenue from the products available on this page and participate in affiliate programs. [Learn more >](#) Losing power is never fun, but it can also seriously mess with your electronics, especially if you don't have a battery backup.

Why do I need a battery-backed ups?

Batteries enable a UPS to power your devices once the grid fails. That's why it's essential to choose a UPS with enough battery-backed outlets to support the devices you want to keep online. More advanced UPS models typically offer more outlets (and more that are battery-backed).
