

## Battery backup to power tv

Do you need a battery backup?

One important part of your plan should be considering battery backups--also known as an uninterruptible power supply, or UPS--which will automatically take over when the power drops or goes out entirely. But no one solution's perfect for everyone.

Does a UPS battery backup need to power up?

Unlike a backup generator, it does not need to power up in order to start generating power. In other words, if you experience a power outage in your area, your machinery should not shut down if it is plugged into a UPS battery backup.

What makes a good UPS battery backup?

Even if you're not prone to power outages, many UPS models also include surge protection features. An automatic voltage regulator smoothes over brownouts and spikes without needing to change your battery. It's one of several capabilities you'll want to look for in the best battery backups.

How many watts can a battery backup output?

In general, the best battery backups can output at least 400W. UPS models include several different features, but you'll want to focus on a couple, depending on what you want to back up. A sine-wave inverter allows a UPS to produce a clean sine waveform, which is the best type for power output.

How can I Make my TV last longer on backup power?

You can always measure the power consumption of your TV or use our TV power consumption estimation tips to adjust the numbers for your specific setup. And, of course, you can do things to minimize the amount of power your TV consumes, which is a great first step to making your TV last longer on backup power.

Can a UPS battery backup cause a power outage?

In other words, if you experience a power outage in your area, your machinery should not shut down if it is plugged into a UPS battery backup. Many models of uninterruptible power supply (UPS) also provide surge protection. A surge protector blocks spikes in voltage so that they do not harm your electronics.
