Your solar panels generate direct current (DC) electricity from the sun's energy. The DC solar energy flows through an inverter (or multiple inverters), which converts it to alternating current (AC) electricity, the type of electricity that most home appliances use. You run your home on this AC electricity.

We've been testing solar panels with integrated batteries for years, and most of the power bank/solar panel combos we've tried haven't performed well as solar panels. However, the Hiluckey HIS025 25000mAh Power Bank uses a newer design that makes it perform better as a solar panel. This power bank features a four-panel fold-out solar array.
