The equipment consists of a control unit, a welding hand gun, and all necessary inter- connecting cables. THE PROCESS Capacitor Discharge (CD) stud welding is a form of welding in which the energy re- quired for the welding process is derived from a bank of charged capacitors. This

A Capacitor Discharge Stud Welder is a type of welding tool used to attach studs to metal surfaces without the need for pre-drilled holes. It operates by storing energy in a capacitor and discharging it all at once to generate a high welding temperature in just a few milliseconds, allowing for more efficient and precise welding.
