Sunlight is composed of photons, or particles of solar energy. These photons contain varying amounts of energy that correspond to the different wavelengths of the solar spectrum.. A PV cell is made of semiconductor material. When photons strike a PV cell, they may reflect off the cell, pass through the cell, or be absorbed by the semiconductor material.

Solar energy is radiant energy emitted from the sun and solar power is obtained by harvesting that energy. The most common way we harvest solar energy is through the use of solar panels but other ways are solar thermal energy, biofuels, and artificial photosynthesis. How Does Solar Energy Work For Kids
