energy density through maximum utilization of the capacitor energy storage capability. Efficiency of the SSC energy buffer can be extremely high because the switching network need operate at only very low (line-scale) switching frequencies, and the system can take advantage of soft charging of the energy storage capacitors to reduce loss [18].

In a cardiac emergency, a portable electronic device known as an automated external defibrillator (AED) can be a lifesaver. A defibrillator (Figure (PageIndex{2})) delivers a large charge in a short burst, or a shock, to a person's heart to correct abnormal heart rhythm (an arrhythmia). A heart attack can arise from the onset of fast, irregular beating of the heart--called cardiac or ...

What are a power factor and power factor correction? Many electronic circuits have a capacitor at the input of the power supply so as to operate with DC voltage. This capacitor might causes a phase shift between the sinusoidal AC power supply voltage and current and the power factor (PF) will drop. A power factor correction (PFC) circuit ...
