How is energy storage of supercapacitors different from electrochemical battery system?

Supercapacitors store energy differently than electrochemical battery systems. In supercapacitors, energy is stored by means of an electrolyte solution between two solid conductors (rather than a solid dielectric between the electrodes), resulting in a differing energy storage mechanism.

What are the different types of storage batteries?

Storage batteries can widely be divided into solid state batteries and flow batteries using solid and liquid electrolytes, respectively. Electricity is a dominant form of energy but limited by variations in instantaneous demand daily and seasonally. Energy storage is useful in balancing the demand and supply of electric power.
