We estimate that by 2040, LDES deployment could result in the avoidance of 1.5 to 2.3 gigatons of CO<sub>2</sub> equivalent per year, or around 10 to 15 percent of today's power sector emissions. In the United States alone,

LDES could reduce the overall cost of achieving a fully decarbonized power system by around \$35 billion annually by 2040.

The second award "Phase Change Energy Storage Technology Innovation Gold Award" was won by COLMO CFXH2050 water heater, in recognition of the product's innovation in phase change energy storage. Phase change materials (PCMs) change from solid to liquid when they absorb heat, and from liquid to solid when they release heat.

What are the applications of energy storage systems? Energy Storage Systems can effectively operate at metropolitan constructions, telecom applications and events, and with renewable sources of energy. In a busy construction site, where peaks in demand usually occur during daytime, energy storage systems complement the power supplied by generators.

Global investment in battery energy storage exceeded USD 20 billion in 2022, predominantly in grid-scale deployment, which represented more than 65% of total spending in 2022. After solid growth in 2022, battery energy storage investment is expected to hit another record high and exceed USD 35 billion in 2023, based on the existing pipeline of ...
