Secondly, the heating principle of the power battery, the structure and working principle of the new energy vehicle battery, and the related thermal management scheme are discussed.

The wind does not always blow and the light does not always shine, solar and wind power are insufficient. Hybridizing solar and wind power sources (min wind speed 4-6m/s) with storage batteries to replace periods when there is no sun or wind is a practical method of power generation. This is known as a wind solar hybrid system.
