This operation must be done with the engine shut off and no vacuum in the power brake system. With the master cylinder reservoir filled, open No.1 bleed screw on the Hydrovac and depress the brake pedal to expel air. When the brake pedal has reached the toe board, close the bleed screw before returning pedal to release position.

Vacuum is created by the engine, but sometimes the vacuum is not enough to support a power brakes system. So, what can you do about it? Benefits of a Vacuum Pump. The vacuum pump does what the name implies: increases vacuum in the system to the required 18"--making your brake booster perform properly. However, not all vacuum pumps are ...

2011-2016 Ram C/V 2012-2015 without Master Cylinder.

Step 4: Mount the Electric Brake Booster Vacuum Pump. Prepare the Pump: Gather all the necessary components included with the electric brake booster vacuum pump kit, such as brackets, bolts, nuts, gaskets, or rubber isolators. Ensure that you have everything ready for the installation; Position the Pump: Carefully position the electric brake ...

The brake assist is driven by the power steering pump on the driver's side of the engine mounted behind the vac pump. The vac pump only operates your front axle engagement and your climate controls. I'd peek at all the fluids after you hear moaning, and maybe get a stethoscope on it to try and identify where the noise is coming from.

A vacuum check valve is also mounted on the front of the booster. A vacuum line connects the check valve to engine source vacuum. The booster input rod extends through the dash panel and connects to the brake pedal. This vehicle uses a tandem diaphragm, single rate vacuum power brake booster with 203 and 229 mm (8 and 9 in.) diaphragms.

Sweeting Performance develops Hydro-Boost / Hydro-Max, Vacuum, and Air/Hydraulic brake system answers to the needs of high performance vehicles, gets stock vehicles back on the road, and creates conversion replacements for obsolete part numbers.
