What are the performance parameters of energy storage capacity?

Our findings show that energy storage capacity cost and discharge efficiency are the most important performance parameters. Charge/discharge capacity cost and charge efficiency play secondary roles. Energy capacity costs must be \leq US\$20 kWh⁻¹ to reduce electricity costs by \geq 10%.

Do charge power and energy storage capacity investments have O&M costs?

We provide a conversion table in Supplementary Table 5, which can be used to compare a resource with a different asset life or a different cost of capital assumption with the findings reported in this paper. The charge power capacity and energy storage capacity investments were assumed to have no O&M costs associated with them.

How can battery storage help reduce energy costs?

Simultaneously, policies designed to build market growth and innovation in battery storage may complement cost reductions across a suite of clean energy technologies. Further integration of R&D and deployment of new storage technologies paves a clear route toward cost-effective low-carbon electricity.
