Dte energy solar panels

We"re adding even more solar energy to the grid, the least expensive way to provide all Michiganders with access to solar power. Our new solar parks will include the latest panel technology so we can take full advantage of the sun"s rays, even on cloudy days.

The plan includes bringing online an additional 420 megawatts of solar energy by 2022, or enough clean energy to power 120,000 homes. The new solar assets will source clean energy purchases from corporate, municipal and industrial customers participating in the company"s MIGreenPower program.

DTE is developing renewable energy projects across Michigan. Our projects create jobs, provide economic benefits to local communities and help protect the environment for future generations. Download a map of our renewable energy projects.

Solar energy uses photovoltaic panels to generate electricity by converting the sun"s rays into power. Solar arrays, or groups of panels, are built in areas that offer an unobstructed view of the sky and can produce enough electricity to power hundreds or even thousands of homes.

Community solar projects planned in Detroit, Highland Park and River Rouge to increase access to renewable energy for low income customers. DTE will have more than 2,700 megawatts of renewable energy by 2023, enough to power 900,000 Michigan homes.

Support Michigan-Made Renewable Energy. MIGreenPower is a simple and affordable program that puts more clean energy on the grid. When we work together, the impact we can make is significant. Our 50-plus wind and solar parks already generate enough clean energy to power more than 750,000 homes.

DTE Energy (NYSE:DTE) today announced it will complete a 40% increase in its renewable energy capacity this year. The 535-megawatt increase includes three wind parks that began operating in the spring and one solar park that will come online before the end of the year.
