

Dual battery power systems overland

How do Overlander batteries work?

Overlanders can accomplish this either with one battery bank shared between these two uses, or a dual battery bank setup. Dual battery setups use one battery for vehicle uses (a "starter battery") and a completely separate one for things that make you feel at home (a "house battery").

Do you need a dual battery setup for overlanding?

Dual battery setups use one battery for vehicle uses (a "starter battery") and a completely separate one for things that make you feel at home (a "house battery"). The dual setup is preferred as the engine battery requirements are very different from the "house" or camping requirements.

What type of battery should I use for overland?

For this reason, lithium batteries, like our Battle Born Batteries, are best for house or camping batteries and a lead-acid or AGM is best for starting. If you want to see a schematic of what an Overland dual battery setup looks like, check out the Mortons On The Move electrical build and get access to the full-resolution version.

What is a traditional dual battery setup?

A traditional dual battery setup uses an isolator that charges both batteries separately. This means if anything goes wrong with one, the other isn't affected. If your house battery dies, you'll still be able to move your vehicle. Here's how it works: Now, let's cover the main types of dual battery setups. 1. Traditional Dual Battery Setup

Are lithium batteries a good option for an overland battery setup?

Lithium batteries tend to weigh significantly less than their traditional counterparts in an overland battery setup. This means overlanders upgrading to lithium will enjoy the same amount of power as before. Plus, they'll have more weight available for other essential items. In addition, there are handling concerns to keep in mind, as well.

How do I choose a dual battery setup?

Select a Dual Battery Setup That Meets Your Camping Power Needs **OPTION 1 - Single Battery Setup**
(Using your vehicle's existing 12v Power for Camping) Your vehicle's electrical system consists of an alternator that charges a battery that supplies power to start and run your vehicle, as well as power 12v accessories. [View fullsize](#)
