A solar eclipse occurs when the Moon passes between Earth and the Sun, thereby obscuring the view of the Sun from a small part of Earth, totally or partially. An alignment occurs approximately every six months, during the eclipse season in its new moon phase, when the Moon's orbital plane is closest to the plane of Earth's orbit. [1] In a total eclipse, the disk of the ...

El hecho de que el Sol sea 400 veces más ancho que la Luna, pero también está 400 veces más lejos, crea el escenario perfecto para que un eclipse solar se lleve a cabo. Sin olvidar que para que esto funcione, la Luna debe estar en fase de novilunio, mejor conocida como "Luna nueva", que es cuando su hemisferio iluminado por el Sol no puede ser visible desde la Tierra.

2 days ago; Un eclipse se produce cuando un planeta o una luna se interpone en el camino de la luz del sol. Aquí; en la Tierra, podemos experimentar dos clases de eclipses: eclipses solares y eclipses lunares. ¿Cuál es la diferencia? Eclipse solar. Un eclipse solar se produce cuando la luna se interpone en el camino de la luz del sol y proyecta su sombra en la Tierra.
