What are electrical energy storage systems (EESS)?

Electrical energy storage systems (EESS) for electrical installations are becoming more prevalent. EESS provide storage of electrical energy so that it can be used later. The approach is not new: EESS in the form of battery-backed uninterruptible power supplies (UPS) have been used for many years. EESS are starting to be used for other purposes.

Can electrical energy storage solve the supply-demand balance problem?

As fossil fuel generation is progressively replaced with intermittent and less predictable renewable energy generation to decarbonize the power system, Electrical energy storage (EES) technologies are increasingly required to address the supply-demand balance challenge over a wide range of timescales.

What are the different types of energy storage technologies?

Classified by the form of energy stored in the system, major EES technologies include mechanical energy storage, electrochemical/electrical storage, and the storage based on alternative low-carbon fuels.

Renewable energy sources like wind and solar have limited use on the electric grid due to their intermittent nature. Breakthrough electrical energy storage technologies are needed to enable electrified transportation over 300 miles per charge and low-cost grid storage to support renewable penetration over 90% efficiency and 10-year lifespan.

News Release: February 15, 2018 Docket Nos. RM16-23 Item No. E-1 Order No. 841 (Errata Notice) The Federal Energy Regulatory Commission (FERC) today voted to remove barriers to the participation of electric storage resources in the capacity, energy and ancillary services markets operated by Regional Transmission Organizations and Independent System Operators.

While there has been extensive research on power storage planning for pure power systems, developing advanced models with robust optimization [7] and stochastic programming [8], most of the work on heat storages has focused on systems of small scales, such as a microgrid [9], a fuel cell CHP system [10], an off-grid PV-powered cooling system [11], a ...
