

The straightforward topological structure achieved an effective balance between dielectric constant and breakdown strength. The coated film achieved outstanding energy storage performance at high temperatures, with discharge energy densities of 2.94 J/cm³ and 2.59 J/cm³ at 150 °C and 200 °C, respectively. In summary, the surface self ...

(a) The dielectric permittivity (ϵ_r) distribution on the phase diagram of Ba(Ti_{1-x}Sn_x)O₃ (BTS), and the maximum value can reach to 5.4×10^4 at the multi-phase point which is also a ...

Materials offering high energy density are currently desired to meet the increasing demand for energy storage applications, such as pulsed power devices, electric vehicles, high-frequency inverters, and so on. Particularly, ceramic-based dielectric materials have received significant attention for energy storage capacitor applications due to their ...

The electric breakdown strength (E_b) is an important factor that determines the practical applications of dielectric materials in electrical energy storage and electronics. However, there is a tradeoff between E_b and the dielectric constant in the dielectrics, and E_b is typically lower than 10 MV/cm. In this work, ferroelectric thin film (Bi_{0.2}Na_{0.2}K_{0.2}La_{0.2}Sr_{0.2})TiO₃ ...

High recoverable energy-storage density of 22.5 J/cm³ and large dielectric constant of 1120 at 1 kHz were achieved in the BNT-BT-0.05ST thin film with excellent dielectric temperature stability and good frequency stability. The high recoverable energy density and good thermal stability of the thin film suggest that it have the potential to be ...

There is an urgent need to develop stable and high-energy storage dielectric ceramics; therefore, in this study, the energy storage performance of Na_{0.5-x}Bi_{0.46-x}Sr_{2x}La_{0.04}(Ti_{0.96}Nb_{0.04})O_{3.02} ($x = 0.025-0.150$) ceramics prepared via the viscous polymer process was investigated for energy storage. It was found that with increasing Sr²⁺ content, the material ...

Further analyzing the P-E curves, we can find that the MD structure can greatly enhance the proportion of the linear dielectric response to the energy storage density (U_{lin}/U_e) as shown in ...

Cheng, S. et al. Polymer dielectrics sandwiched by medium-dielectric-constant nanoscale deposition layers for high-temperature capacitive energy storage. *Energy Storage Mater.* 42, 445-453 (2021).

For relaxor ferroelectrics, the dielectric constant ranges from 500 to 10000 [16, 27]. Due to a very high dielectric constant, low hysteresis, and the diffused dielectric maxima, relaxor ferroelectrics can be used for energy storage media with high energy density and energy efficiency over a broad temperature range [16]. On

the other hand, the ...

Enhancing the energy storage properties of dielectric polymer capacitor films through composite materials has gained widespread recognition. Among the various strategies for improving dielectric materials, nanoscale coatings that create structurally controlled multiphase polymeric films have shown great promise. This approach has garnered considerable attention ...

Nowadays, dielectric materials are playing an increasingly important role in various fields. A high dielectric constant (D) can store more charge per unit volume ... possess unique electrical and magnetic properties with different dielectric constants. It can be used for energy storage devices, 3 solar cell equipment, 4 and ceramic capacitors, 5 ...

For the sake of improving the energy storage performance at elevated temperature, it may be more important to reduce conduction loss than that to blindly pursue high dielectric constant of dielectric materials. Energy storage performances of representative polymer-based nanocomposites with 0D nanofibers at elevated temperature are given in Table 1.

With the wide application of energy storage equipment in modern electronic and electrical systems, developing polymer-based dielectric capacitors with high-power density and rapid charge and discharge capabilities has become important. However, there are significant challenges in synergistic optimization of conventional polymer-based composites, specifically ...

In this work, we report that a polymer dielectric sandwiched by medium-dielectric-constant, medium-electrical-conductivity (s) and medium-bandgap nanoscale deposition layers exhibits outstanding high-temperature energy storage performance. We demonstrate that dielectric constant is another key attribute that should be taken into account for the selection of ...

where the ϵ_0 is the vacuum dielectric permittivity ($8.85 \times 10^{-12} \text{ F m}^{-1}$), and the ϵ_r and E_b are the dielectric constant and breakdown strength of polymer dielectrics, respectively.

With the development of advanced electronic devices and electric power systems, polymer-based dielectric film capacitors with high energy storage capability have become particularly important. Compared with polymer nanocomposites with widespread attention, all-organic polymers are fundamental and have been proven to be more effective ...

Polymer-matrix dielectric composites are promising for use in electrostatic energy storage devices due to the ultra-fast charge-discharge speed and the long service life. Here we report a ...

c) Energy storage performance up to the maximum field. d) Comparison of QLD behavior MLCCs and "state-of-art" RFE and AFE type MLCCs as the numbers beside the data points are the cited references. Energy storage performance as a function of e) Temperature at 150 MV m^{-1} and f) Cumulative AC cycles at

150 MV m⁻¹.

One such dielectric displays an energy density of 8.3 J cc⁻¹ at 200 °C, a value 11 times that of any commercially available polymer dielectric at this temperature.

Dielectric capacitors have garnered significant attention in recent decades for their wide range of uses in contemporary electronic and electrical power systems. The integration of a high breakdown field polymer matrix with various types of fillers in dielectric polymer nanocomposites has attracted significant attention from both academic and commercial ...

The ubiquitous, rising demand for energy storage devices with ultra-high storage capacity and efficiency has drawn tremendous research interest in developing energy storage devices. Dielectric polymers are one of the most suitable materials used to fabricate electrostatic capacitive energy storage devices with thin-film geometry with high power density. In this ...

For linear dielectrics, the energy storage density has a linear relationship with the dielectric constant and breakdown strength, which can be calculated directly using the following formula: $J = \frac{1}{2} \epsilon_0 \epsilon_r E_b^2$ where ϵ_0 is the vacuum dielectric constant, ϵ_r is the relative dielectric constant, and E_b is the breakdown field strength.

In this review, the main physical mechanisms of polarization, breakdown and energy storage in multilayer structure dielectric are introduced, the theoretical simulation and experimental ...

Commonly, a high dielectric constant material is defined as a material with a dielectric constant higher than that of the silicon oxide ($k > 4.0$). Unfortunately, polymer materials typically possess low dielectric constants as shown in Table 1, though they have a high breakdown strength [121]. Therefore, much effort has been devoted to enhance ...

Although prolonged efforts in the field of polymer-polymer dielectric composite films have led to much progress in energy storage and conversion, polymer-polymer composites could have a low dielectric loss, enhanced breakdown, and efficiency performance; they do not create much interest because of one common drawback of low dielectric constant.
