Recently, there has been renewed excitement in lithium metal batteries, lithium-free batteries, and solid-state batteries to realize ambitious performance targets [8-10]. These battery systems resemble conventional lithium-ion batteries in architecture but operate in distinctly new operating domains (see for example Figure 1).

The first step on the road to today's Li-ion battery was the discovery of a new class of cathode materials, layered transition-metal oxides, such as Li_xCoO_2 , reported in 1980 by Goodenough and collaborators. 35 These layered materials intercalate Li at voltages in excess of 4 V, delivering higher voltage and energy density than TiS_2 . This higher energy density, ...

In recent years, batteries have revolutionized electrification projects and accelerated the energy transition. Consequently, battery systems were hugely demanded based on large-scale electrification projects, leading to significant interest in low-cost and more abundant chemistries to meet these requirements in lithium-ion batteries (LIBs). As a result, lithium iron ...

2. **Energy Storage.** Once the energy is stored, the electricity remains in the system in the form of chemical energy. The type of battery used in the system (e.g., lithium-ion, lead-acid, or flow batteries) determines how energy is stored and how much energy the system can hold.

Batteries Part 1 - As Energy Storage Devices. Batteries are energy storage devices which supply an electric current. Electrical and electronic circuits only work because an electrical current flows around them, and as we have seen previously, an electrical current is the flow of electric charges (Q) around a closed circuit in the form of negatively charged free electrons.

Finally, lithium-ion batteries tend to last far longer than lead-acid ones. This means that, even with their higher price tag, lithium-ion batteries generally provide a better value over the long run. Lead Is Dead: Understand How Lithium-Ion Batteries Work and Choose a Better Battery. Lead-acid batteries may still be common, but the trend is clear.
