The Fisher Multiport valve and actuator assembly allows the diversion of fluids from a single flow line to a test outlet or a sampling device. A single Multiport Flow Selector can manifold as many as eight flow lines simultaneously.

Multi-Product Manifolds. GENERAL VALVE* Twin Seal* positive shut-off, double block-and-bleed plug valve was developed specifically for busy multi-product manifolds. Today, refined products that move through pipeline manifolds are reliably segregated by zero-leakage+ GENERAL VALVE Twin Seal plug valves that have a proven in-field track record.

Consensus-based control of hybrid energy storage system with a cascaded multiport converter in DC microgrids. IEEE Trans. Sustain. Energy, 11 (4) (2020), pp. 2356-2366.

The energy storage technology is an effective way to solve this problem because it stores the excess energy generated by renewable energies and releases energy to compensate the gap between demand and supply [3].

Pumped hydroelectric energy storage (PHES) plants have been deployed worldwide because of their attained maturity [4]. However, the ...

Multiport converters are a promising approach for Electric Vehicles (EVs) in hybrid energy sources (HES). These converters are highly suitable for a single conversion when interfaced with ...

A consensus-based control method is developed in this paper to equalize the SOC's among multiple batteries to solve the state-of-charge (SOC) imbalance of multiple batteries for the long lifespan of HESS. This article presents a new consensus-based control method for hybrid energy storage system (HESS) with a cascaded multiport converter in the DC ...

Detailed in this paper is a multiport power electronics interface which serves as an energy router for on-board electric and plug-in hybrid electric vehicles with inductively coupled power transfer (ICPT) and hybrid energy storage systems (HESS). The existing body of literature on HESSs lacks a unified controller and modular, flexible structure as well as integration of ...

In compressed air energy storage systems, throttle valves that are used to stabilize the air storage equipment pressure can cause significant exergy losses, which can be effectively improved by adopting inverter-driven technology. In this paper, a novel scheme for a compressed air energy storage system is proposed to realize pressure regulation by adopting ...

This study presents a novel bidirectional multiport power electronic converter, interfacing medium-voltage and low-voltage distribution grids while integrating distributed energy storage elements, such as batteries and super-capacitors. The multiport energy gateway concept is based on a ...

Per Rego Field Topics. MultiPort ® Pressure Relief Valve Manifold Assemblies are designed for continuous, uninterrupted service on pressurized storage containers with flanged openings. Since these MultiPort ® Manifold Assemblies are exposed to the environment, regular inspections and maintenance are required. The following suggested schedule will help to keep the MultiPort ® ...

Three types of MSSs exist, namely, flywheel energy storage (FES), pumped hydro storage (PHS) and compressed air energy storage (CAES). PHS, which is utilized in pumped hydroelectric power plants, is the most popular MSS.

In this paper, the power control instructions of each port in the distributed energy storage system are obtained by using the model prediction theory, taking the energy balance as the control objective and the nature of the energy storage elements as the constraints.

a single valve. Many parts are fully interchangeable between models. Cost effective Multi-port Series ball valves feature multi-directional control combined with shutoff capacity in one valve. Valve duplication and the need for an extra shutoff valve are eliminated. ADVANTAGES All Multiport Series valves are: > Tested in accordance with ASME B16.34
