

MPS's advanced battery management solutions enable efficient and cost-effective low-voltage energy storage solutions. All of the battery cells within a low-voltage ESS must be carefully managed to ensure safe and reliable operation across a long operating life. This requires a high-performance battery management system (BMS).

BESS (Battery Energy Storage System) is widely employed in both residential and commercial cases. In residential applications, a BESS serves as a backup power supply, preventing unexpected power outages and contributing to cost saving by shifting electrical energy from low-value to high-value periods. In commercial
