

Does NIMBY support energy infrastructure?

In recent decades, scholars have extensively examined levels of support and opposition to energy infrastructure, often with a focus on so-called Not-in-My-Backyard (NIMBY) sentiments. As the need for energy infrastructure grows, so does the need to extract insights and lessons from this literature.

Does NIMBYism explain attitudes toward energy infrastructure?

As a consequence,our review of scores of NIMBY studies leaves us unable to reach a firm conclusion,one way or the other,on the role of NIMBYism in explaining attitudes toward energy infrastructure in general,let alone on how this might differ across technologies or specific project characteristics.

Does NIMBYism impede energy projects?

Planetary rhetoric aside,NIMBYism leads to an abdication of local responsibility,and ultimately impedes energy projectseven if they reduce carbon emissions,like gas and nuclear. There are two comparatively easy practicable ways to combat this regulatory capture and get local governments and the EPA to approve more energy projects.

Is NIMBY opposition a big obstacle to Biden's energy plans?

The amount of renewable energy at play in Vermont may be trivial,but NIMBY opposition is everywhere and could pose big obstaclesfor President Joe Biden's ambitious energy and climate change plans. Biden has set a goal of a carbon-free power sector by 2035,followed by a net-zero economy by 2050.

Does NIMBYism derail local projects?

NIMBYism does not just derail local projects; it also impedes environmentally friendly national policy. Nevada NIMBYs successfully killed the Yucca Mountain nuclear waste storage project,which would have boosted nuclear power generation decades ago and preempted much of our carbon-related problems.

What is energy NIMBYism?

Energy NIMBYism traces its origins to the anti-nuclear movements of the 1960s when several communities refused to allow nearby companies to use nuclear power to produce energy.

Effects of Waste-to-Energy Plants on China's Urbanization: Evidence from a Hedonic Price Analysis in Shenzhen ... the negative emotions of NIMBY may indirectly affect the local property prices ...

More recently, during the period from March 2022 through May 2023, 82 new controversies were reported. At least 228 local restrictions on renewable energy projects are currently in place, along ...

Public support is a key determinant of whether any energy project is developed in democratic countries. In recent decades, scholars have extensively examined levels of support ...

As more wind turbines are placed in order to achieve the global standards of renewable energy until 2020 and 2030 deadlines, a main issue of the NIMBY effect has also emerged, causing additional ...

The Zhangbei energy storage power station is the largest multi-type electrochemical energy storage station in China so far. The topology of the 16 MW/71 MWh BESS in the first stage of the Zhangbei national demonstration project is shown in Fig. 1. As can be seen, the wind/PV/BESS hybrid power generation system consists of a 100 MW wind farm, a 40 MW ...

Most studies analysing conflicts related to renewable energy plants in industrialised countries share the critique of explanations based on the NIMBY syndrome (e.g. Bell et al., 2005; Van der Horst, 2007; Wolsink, 2007; Wüstenhagen et al., 2007; Aitken, 2010; Devine-Wright & Wiersma, 2013). On the one hand, the critique of the NIMBY syndrome ...

In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1]. Fossil fuels have many effects on the environment and directly affect the economy as their prices increase continuously due to their consumption which is assumed to double in 2050 and three times by 2100 [6] g. 1 shows the current global ...

DOI: 10.2478/picbe-2019-0080, pp. 911-919, ISSN 2558-9652| Proceedings of the 13th International Conference on Business Excellence 2019 PICBE | 911 The NIMBY effect towards wind energy instalments ...

The International Renewable Energy Agency predicts that with current national policies, targets and energy plans, global renewable energy shares are expected to reach 36% and 3400 GWh of stationary energy storage by 2050. However, IRENA Energy Transformation Scenario forecasts that these targets should be at 61% and 9000 GWh to achieve net zero ...

Solar, wind, and battery storage technologies are at the forefront of this transformation, offering cleaner and more sustainable energy sources. However, the development of these projects often encounters local resistance, commonly referred to ...

prompt strong local opposition. This is sometimes pejoratively labeled NIMBY (Not In My Backyard) behavior. In this paper I estimate the economic costs of NIMBYism and its role in ...

Not in my backyard" (NIMBY) conflict is a common challenge faced by governments in operating the NIMBY facilities. This paper exploits the 2019 Chinese Social Survey to examine how Internet use ...

Global investment in battery energy storage exceeded USD 20 billion in 2022, predominantly in grid-scale deployment, which represented more than 65% of total spending in 2022. After solid growth in 2022, battery energy storage investment is expected to hit another record high and exceed USD 35 billion in 2023, based on the existing pipeline of ...

Data and structure of energy storage station. A certain energy storage power station in western China is composed of three battery cabins. Each compartment contains two stacks (1, 2), and each ...

Sanya Carley, Indiana University and David Konisky, Indiana University. As Congress debates billions of dollars in new infrastructure investments, advocates are touting the social and economic benefits of building new high-voltage transmission lines, clean energy plants and electric vehicle charging stations, along with fixing aging roads and bridges. . But when it's ...

DOI: 10.1016/j.est.2023.108623 Corpus ID: 261161645; A study on site selection of pumped storage power plants based on C-OWA-AHP and VIKOR-GRA: A case study in China @article{Cheng2023ASO, title={A study on site selection of pumped storage power plants based on C-OWA-AHP and VIKOR-GRA: A case study in China}, author={Xian Cheng and H Zhao ...

A potential obstacle to achieving the preferred outcome is NIMBYism (Not In My Back Yard). The core idea of NIMBYism, which gained prevalence in the 1980s, is that citizens oppose the siting of facilities in their neighborhood for self-interested and parochial reasons (e.g. Hall, 1989). More formally, Wolsink (2000: 53) defines NIMBY as "people that combine a ...

The facilities that produce NIMBY effect usually have a positive effect on the whole society, but people refuse to get close to them and resist the facilities that live around them [3].

China is experiencing fast urbanization and its urban citizens' growing concern for urban disamenity has imposed a serious challenge for the urban management. This paper assesses the impact of a typical environmental facility, namely waste transfer stations, on housing values in Shanghai, China. Through hedonic pricing models, we detect an inverted-U pattern ...

This study undertook the urban immovable property valuation in two major cities of Punjab; Lahore and Faisalabad, using big data and advanced spatial analysis techniques to explore the significant ...

In addition, based on the summaries of the existing studies on the formation mechanism of the NIMBY effect, we could summarize the critical factors leading to the NIMBY effect from the following four categories: (1) public-related factors, such as self-interest, perceived risk, prejudice, etc.; (2) society-related factors, such as media reports ...

In order to ensure the normal operation and personnel safety of energy storage station, this paper intends to analyse the potential failure mode and identify the risk through DFMEA analysis method ...

The integrated energy system (IES) coupled with renewable energy power generation and hydrogen energy storage (HES) is an effective way to achieve clean and low-carbon energy consumption, with ...

Garrett Hering on the coming wave of energy storage deployments, starting with Plus Power's Kapolei Energy Storage facility in Hawaii and our 250-MW Sierra Estrella Energy Storage and 90-MW Superstition Energy Storage facilities for Salt River Project. The piece notes that Plus Power has secured an excess of battery supply--6.5 GWh--to ...

Waste incineration technology has received extensive attention for its advantages of being harmless, reducing, and recycling. However, the waste-to-energy incineration project confronts significant "not-in-my-backyard (NIMBY) concerns," and irrational location choices will have negative effects on the project's economy and sustainability; it is ...

At first glance, the difference in support for nuclear energy the frames is marginal. However, the aim of this paper is not to test the support for nuclear energy (with different types of benefits) per se but about support for nuclear energy conditional on the Fukushima effect, the NIMBY effect, (and income).

Tehachapi Energy Storage Project, Tehachapi, California. A battery energy storage system (BESS) or battery storage power station is a type of energy storage technology that uses a group of batteries to store electrical energy. Battery storage is the fastest responding dispatchable source of power on electric grids, and it is used to stabilise those grids, as battery storage can ...

The first 2 MW unit of the 6 MW energy storage station of the National Wind-Photovoltaic-Storage-Transmission Demonstration Project was connected to the grid successfully. 2010. ... Rejecting Necessary Cookies may affect how the website functions. For more information, ...

This chapter deals with the social acceptance of renewable energies in their most visible and immediate form: the location of production facilities. We start from the critical ...

School of Environment and Energy, Peking University Shenzhen Graduate School, Shenzhen 518055 2. College of Environmental Sciences and Engineering, Peking University, Beijing 100871; ... The result shows that the NIMBY-effect spatial varies significantly in Haidian District, and the NIMBY-index is high in the south and low in the north, which ...
