

What is an energy storage system?

An energy storage system (ESS) for electricity generationuses electricity (or some other energy source, such as solar-thermal energy) to charge an energy storage system or device, which is discharged to supply (generate) electricity when needed at desired levels and quality. ESSs provide a variety of services to support electric power grids.

The U.S. residential energy storage market grew rapidly during 2017-20, driven by homeowners seeking to increase resiliency, changes in net metering programs, and the financial benefits of installing a system. The residential energy storage system (ESS) market was dominated by Tesla in 2020 and, as a

Pumped storage hydropower represents the bulk of the United States" current energy storage capacity: 23 gigawatts (GW) of the 24-GW national total (Denholm et al. 2021). This capacity was largely built between 1960 and 1990. PSH is a mature and proven method of energy storage with competitive round-trip efficiency and long life spans.

Battery energy storage systems have become the fastest-growing grid-scale energy technology in America, alongside solar generation.
