Are mechanical energy storage systems cost-efficient?

The results indicated that mechanical energy storage systems, namely PHS and CAES, are still the most cost-efficient options for bulk energy storage. PHS and CAES approximately add 54 and 71 EUR/MWh respectively, to the cost of charging power. The project's environmental permitting costs and contingency may increase the costs, however.

What is the cheapest energy storage system?

In terms of TCC (total capital cost), underground CAES (with 890 EUR/kW) offers the most economical alternative for bulk energy storage, while SMES and SCES are the cheapest options in power quality applications. However, the cost data for these electro-magnetic EES systems are rather limited and for small-scale applications.
