An energy storage system (ESS) for electricity generation uses electricity (or some other energy source, such as solar-thermal energy) to charge an energy storage system or device, which is discharged to supply (generate) electricity when needed at desired levels and quality. ESSs provide a variety of services to support electric power grids ...

Driven by global concerns about the climate and the environment, the world is opting for renewable energy sources (RESs), such as wind and solar. However, RESs suffer from the discredit of intermittency, for which energy storage systems (ESSs) are gaining popularity worldwide. Surplus energy obtained from RESs can be stored in several ways, and later ...

Due to the variable and intermittent nature of the output of renewable energy, this process may cause grid network stability problems. To smooth out the variations in the grid, electricity storage systems are needed [4], [5]. The 2015 global electricity generation data are shown in Fig. 1. The operation of the traditional power grid is always in a dynamic balance ...
