Energy storage systems are designed to capture and store energy for later utilization efficiently. The growing energy crisis has increased the emphasis on energy storage research in various sectors. The performance and efficiency of Electric vehicles (EVs) have made them popular in recent decades.

The electricity grid is the largest machine humanity has ever made. It operates on a supply-side model - the grid operates on a supply/demand model that attempts to balance supply with end load to maintain stability. When there isn't enough, the frequency and/or voltage drops or the supply browns or blacks out. These are bad moments that the grid works hard to ...
