Dielectric capacitors are essential components of advanced high-power electrical and electronic systems for electrical energy storage. The drastic reductions in the energy density and the charge-discharge efficiency of dielectric polymers at elevated temperatures, owing to sharply increased electrical conduction, remain a major challenge.

Fossil fuel depletion, climate change and greenhouse gas emissions has necessitated the change to renewable energy sources (Zhou et al., 2016), such as solar and wind, and it has consequently become a challenge to balance the correct mix of energies accordingly (Dassisti and Carnimeo, 2012). One of the most effective
