The ETA calibre 2892 has a predecessor and two successors, whom we call calibre 2824 and calibres 2892-2 and 2892-A2 respectively. All these calibres share the same roots and provide the same features with very minor production differences - so much that between the 2892-2 and the 2892A2, almost every part is interchangeable. Had there been drastic changes made, the ...

ETA 2824-2 11 ½ """ Diameter 25,60 mm Height 4,60 mm Hours, minutes, central second Date display in window, semi-instantaneous Quick correction of date Time setting with stop-second Self-winding mechanism, bidirectional Frequency: 28"800 vibrations per hour; 4 Hz 25 jewels

Technical Data: Overall 26 mm Case fitting 11 1/2 Line = 25,6 mm Height: 4.6 mmMechanical self-winding mechanism with ball bearing 28"000 ...

I find both the ETA 2824-2 and Miyota 9015 to be substantially better than the NH35. I consider the standard grade of the ETA 2824-2 to be roughly comparable to the Miyota 9015, but the higher grades are superior. The only benefit to the NH35 is that it is cheap, and I would only consider it in a watch under \$250.

This freedom in movement creates more energy for the caliber"s power reserve. And as such, when the ETA 2824-2 is fully wound, the movement can stay functional for up to 38 hours. ... Why has ETA 2824-2 been Replaced by ETA 2836-2. The ETA 2824 bests 2836, no doubt about that. However, the workhorse is gradually getting replaced by 2836. The ...

Eta2824-2 energy storage

The ETA 2824-2 is also equipped with a ball-bearing rotor that winds bidirectionally to energise its power reserve. Once fully wound, this ETA movement can last for approximately 38 hours. Ensuring each component stays in place is the Novodiac anti-shock system. Accompanied by its 25 jewels, the Novodiac anti-shock system also helps in reducing ...

The energy storage capacity of eta2824-2 is significant, making it an attractive option for various applications. Here are the key points: 1. Higher energy density compared to conventional alternatives, which enhances performance; 2.Long cycle life ensures longevity and reliability in usage; 3.Rapid charge and discharge rates facilitate efficient energy management; 4.

Here"s a chart of some of the info on the ETA 2824-2, 2892-A2, & 7750 movements: ETA"s holy trinity. COSC Standards Average daily rate: -4/+6 sec Mean variation in rates: 2 sec Greatest variation in rates: 5 sec Difference between rates in horizontal & vertical positions: -6/+8 sec

ETA Caliber 2824-2 is a popular Swiss-made automatic movement that has been in use since the early 1980s. It is known for its reliability and accuracy, and it is capable of powering a variety of watches, from dress watches to sports watches. The movement contains 25 jewels and has a frequency of 28,800 beats per hour, which translates to 8 ticks per second. It also has a power ...

The ETA 2824-2 is, without a doubt, the most well-known and prevalent Swiss automatic caliber. It began life as the 2824 (without the "-2") in 1971, although the movement can trace certain design features like the rotor with ball bearings back to 1948"s Eterna 1247. Despite its extensive history, the design is far from obsolete today.

One of the most common Swiss watch movements, the ETA 2824-2 is the third refinement of the original ETA 2824. Like most ETA movements, Cal. 2824-2 is available in Standard, Elaborate, Top, and Chronometer versions. The similar ETA 2836-2 adds a day wheel. Cal. 2824-2 replaced Cal. 2824-1 in 1982 and remained in production through 2021.

The winding works thanks to a double-click wheels system, devised by Eterna, which allows the mechanism to charge energy in both directions. In fact, the ball-bearing rotor is also an Eterna patent from 1948, known as "Eterna-Matic" at the time and present in the 1429U and 1439U calibers. ... ETA 2824-2 vs ETA 2836-2.

Cost - The 25 Jewel ETA 2824-2 Automatic Movement can be purchased from Ofrei (A large watch materials
