With an efficiency of 40% to 60%, CAES (and liquid air storage) are good competitors to hydrogen for long term energy storage. Flywheels are far more efficient over the short term and therefore ...

The core element of a flywheel consists of a rotating mass, typically axisymmetric, which stores rotary kinetic energy  $E$  according to (Equation 1)  $E = \frac{1}{2} I \omega^2$  [J], where  $E$  is the stored kinetic energy,  $I$  is the flywheel moment of inertia [kgm<sup>2</sup>], and  $\omega$  is the angular speed [rad/s]. In order to facilitate storage and extraction of electrical energy, the rotor ...
