

Beacon Power is building the world's largest flywheel energy storage system in Stephentown, New York. The 20-megawatt system marks a milestone in flywheel energy storage technology, as similar systems have only been applied in testing and small-scale applications. The system utilizes 200 carbon fiber flywheels levitated in a vacuum chamber.

The flywheel energy storage system (FESS) offers a fast dynamic response, high power and energy densities, high efficiency, good reliability, long lifetime and low maintenance requirements, and is particularly suitable for applications where high power for short-time bursts is demanded. FESS is gaining increasing attention and is regarded as a ...

Mechanical bearings in flywheel energy storage systems might lose 20% to 50% of their energy in just two hours. The flywheel shifting direction owing to the earth's rotation causes a lot of the friction that causes this energy loss (an effect similar to that shown by a Foucault pendulum). The gyroscopic forces exerted by the flywheel's

The anatomy of a flywheel energy storage device. Image used courtesy of Sino Voltaics . A major benefit of a flywheel as opposed to a conventional battery is that their expected service life is not dependent on the number of charging cycles or age. The more one charges and discharges the device in a standard battery, the more it degrades.

Flywheel energy storage systems are feasible for short-duration applications, which are crucial for the reliability of an electrical grid with large renewable energy penetration. Flywheel energy storage system use is increasing, which has encouraged research in design improvement, performance optimization, and cost

The core element of a flywheel consists of a rotating mass, typically axisymmetric, which stores rotary kinetic energy  $E$  according to (Equation 1)  $E = \frac{1}{2} I \omega^2$  [J], where  $E$  is the stored kinetic energy,  $I$  is the flywheel moment of inertia [kgm<sup>2</sup>], and  $\omega$  is the angular speed [rad/s]. In order to facilitate storage and extraction of electrical energy, the rotor must be part of ...
