How is energy stored in a carbon fiber forefoot?

Additional energy is stored during the deflection of the carbon fiber forefoot (Collins and Kuo 2010; Zelik et al. 2011; Segal et al. 2012; Zelik 2012). The timing of the energy release is controlled with the ability to augment the powered plantar flexion phase of terminal stance.

Does late stance dorsiflexion affect energy storing feet?

Both conventional feet (with ankle axis) showed greater early stance plantar flexion motion. The late stance dorsiflexion motion in the ankle showed no statistically significant difference ($p=0.145$). Various authors have reported a greater late stance dorsiflexion for energy storing feet.
