Clean Energy Source. Nuclear is the largest source of clean power in the United States. It generates nearly 775 billion kilowatthours of electricity each year and produces nearly half of the nation's emissions-free electricity. This avoids more than 471 million metric tons of carbon each year, which is the equivalent of removing 100 million cars off of the road.

Pumped storage (PS) technology represents the most extensively developed means of addressing long-term storage demands (Meng et al., 2022, Nestor et al., 2021) Aggregation of rapid start-up and shutdown, coupled with variable output, necessitates seamless switching between pumping and generating phases within
