operate the motor starter relay rather than the motor. 2) Wall-mounted circuit breakers are designed to protect building wiring, not motors plugged into wall receptacles. If your electrical box circuit breaker trips before your motor burns up, it is incidental, not on purpose. However, motor starters are designed to trip on

There are several ways to categorize the traction electric motors used in BEVs: Series wound DC motors, Shunt wound DC motors, and Independently excited DC motors are the most popular DC motors used in BEVs. Induction motors (IM), Synchronous motors (PM brushless motor), and Switched reluctance motors are the AC motor choices .

However, the DC energy storage element implemented in converters is the main factor contributing to their size and weight, and it is an expensive element which is most frequently damaged in operation [31]. Additionally the DC energy storage in the form of electrolytic capacitors determines and shortens a converter"s life time [32].
