Energy Storage Systems are structured in two main parts. The power conversion system (PCS) handles AC/DC and DC/AC conversion, with energy flowing into the batteries to charge them or being converted from the battery storage into AC power and fed into the grid. Suitable power device solutions depend on the voltages supported and the power flowing.

The Ruien Energy Storage project is Wärtilä's first in Belgium and one of the largest systems in the country to-date. The 25 MW / 100 MWh energy storage system helps the customer to regulate fluctuations and supply peak power with stored renewable energy in the grid. With improved reliability, the system also improves revenues.

Storing excess energy also enables your fixtures to remain lit at dusk or when the wind stops blowing. To summarise, energy storage enables an energy reservoir to be charged when production is at its peak and demand is low. Energy will then be dispensed when the production drops and the demand increases. FAQs
