What is the energy storage capacity of a gravity piston?

$E_p$  is the energy stored in the gravity piston. The compressed air part relies on the air compression and expansion for energy conversion, and its energy storage capacity can be expressed as:  $E_p = \eta_A \frac{P_1 V_1 - P_2 V_2}{\gamma - 1}$  where  $\eta_A$  is the circulation efficiency of isothermal compressed air.  $V_1$  is the volume of air before compression.
