

Host energy systems

Who is host energy systems?

HoSt Energy Systems is a family company from the Netherlands and leader in high-tech renewable energy systems. Our systems are equipped with proprietary technologies. Designed to maximize efficiency and environmental performance. By offering a wide portfolio range in one place, we realize sustainability ambitions.

Why should you choose host energy systems?

Industrial biomass and waste-fired boiler plants for renewable heat and power generation. Easily integrable with carbon capture technology for CO₂ recovery and bioCO₂ production. HoSt Energy Systems is a family company from the Netherlands and leader in high-tech renewable energy systems. Our systems are equipped with proprietary technologies.

What technologies does HoSt North America use?

HoSt North America's biogas facilities are equipped with high-tech anaerobic digesters and other proprietary technologies. HoSt North America offers all essential add-on renewable gas technologies and valorization under one roof.

Why should you choose HoSt North America?

HoSt North America is the technology leader empowering your sustainability ambitions, no matter which field or technology of their portfolio you are interested in. They offer high-tech biogas production and utilization plants, including anaerobic digesters, to produce Renewable Natural Gas (RNG) from organic waste.

Our high-tech systems, bolstered with proprietary complementary technologies, lead the way towards decarbonization and represent a holistic suite of established energy technologies and pioneering innovations.

As a company, HoSt is a one-stop-shop in terms of technology portfolio scope where, alongside the building of bioenergy facilities, it also offers 24/7 service and maintenance and renewable energy as a service for heat, electricity, and gas where it has a portfolio of 10 own renewable energy plants that supply renewable energy by the end of 2021.

Anaerobic digesters, or biogas plants, produce renewable natural gas, or green energy, from a mixed feedstock of manure and organic residues. ... HoSt offers various Infeeder systems. The most suitable system for the project is chosen based on the type of feedstock. Solid feeders are typically placed on weighing cells to ensure precise product ...

Host energy systems

VANCOUVER, Wash., Aug. 28, 2024 /PRNewswire/ -- HoSt Bio-Energy Systems North America and Bright Renewables North America have been selected to provide Renewable Natural Gas (RNG) technologies for ...

The anaerobic digestion of manure offers a cost-effective and sustainable way of generating RNG to meet the needs of the agricultural and farming industries. Our biogas systems ensure optimal biogas production, thanks to the use of in-house technology and our 24/7 service and maintenance. Additionally, the byproduct of the anaerobic digestion ...

Since 1999, HoSt has been an independent business focused solely on developing biomass processing systems and sustainable energy generation from biomass. HoSt specializes in processing various waste streams from the food industry and agricultural by-products like straw, chaff, and grass cuttings.

HoSt Energy Systems builds turn-key biogas plants utilizing anaerobic digestion to produce biogas from any organic residual stream. These AD plants can be supplied with in-house biogas upgrading, bio-LNG, bio-CNG, and CO2 liquefaction technology. Biogas plants.

Join HoSt Bio-Energy Systems, where your practical skills and design expertise will help propel innovative, sustainable solutions to the forefront of our mission for a cleaner future. Key Details: Company: HoSt Bio-Energy Systems; Position: Electrical Engineer; Salary: \$100,000 - ...

HoSt Bio-Energy Systems is positioned to provide integrated solutions, from hydrogen for energy transportation and storage to RNG for high-intensity applications and bio-methanol for high-value polymers and fuels. We will continue to innovate and adapt as the industry evolves.

Bright Renewables offers systems for biogas upgrading, biomethane liquefaction (bio-LNG), biomethane compression (bio-CNG), carbon capture, CO2 liquefaction, Energy as a Service, and renewable gas trade services, optimizing renewable energy production and management. HoSt specializes in biogas plants, RDF/waste-fired and wood-fired boiler plants, ...

HoSt Bio-Energy Systems North America and Bright Renewables North America have been selected to provide renewable natural gas (RNG) technologies for Global NRG Renewables" distillery waste-to-RNG project in Louisville, Kentucky. The project will convert 105 million gallons per year of distillery waste into high-quality RNG, which can be used for heat, ...

Biogas upgrading systems from HoSt use in-house membrane technology, to efficiently upgrade the biogas to biomethane with >99.5% methane recovery - for optimal biomethane utilization. During this process, raw biogas is purified by removing impurities such as CO2 - where selective membranes allow the passage of CO2 but not methane. ...
