

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

How much energy does a lithium secondary battery store?

Lithium secondary batteries store 150-250 watt-hours per kilogram(kg) and can store 1.5-2 times more energy than Na-S batteries, two to three times more than redox flow batteries, and about five times more than lead storage batteries. Charge and discharge efficiency is a performance scale that can be used to assess battery efficiency.
