Can a grid inverter work without a battery?

Some grid inverters have a feature called islanding. This means that it can work without a grid and sometimes without a battery. You need to make sure you get the right inverter for this. The AC unit will have a surge current that can draw 2-3 times as much power during the first 3 seconds of startup.

Do solar panels provide enough energy to power your home?

But during the day your solar panels are likely providing more than enough energyto power your home. The excess energy is sent into the grid to power your local community. Simply put,when the sun's shining,you use your own solar power and send excess power to the grid; when it's not,you draw from the grid.
