Hysteresis is a phenomenon observed in various systems where the response of the system lags behind the changes in the influencing forces. In the context of magnetism, the hysteresis loop is a graphical representation of the relationship between the induced magnetic field (B) and the magnetizing force (H) for a given magnetic material.

Hysteresis in Magnetic Recording Because of hysteresis, an input signal at the level indicated by the dashed line could give a magnetization anywhere between C and D, depending upon the immediate previous history of the tape (i.e., the signal which preceded it).
