What is a unit for energy storage?

1 Units for energy storage are generally expressed in terms of the maximum amount of energy,e.g.,watt-hoursthat can be made available over a specified amount of time (e.g.,2 hours), as the device is not generating energy but merely storing it for later use.

What type of batteries are used in stationary energy storage?

The existing capacity in stationary energy storage is dominated by pumped-storage hydropower (PSH),but because of decreasing prices,new projects are generally lithium-ion(Li-ion) batteries.
