Kinetic Energy Storage System (KESS) During propulsion, diesel energy is converted to electricity. Energy flows from the motors and is stored in the KESS unit. During acceleration, both the diesel engine and the energy stored in the KESS can provide the equivalent of one 400 HP engine being boosted by another 550 HP engine.

Kinetic Energy Storage System (KESS) During propulsion, diesel energy is converted to electricity. Energy flows from the motors and is stored in the KESS unit. During acceleration, the diesel engine and the stored KESS energy generate an additional 550 HP in underground LHDs and 1,100 HP in surface wheel loaders.
