Whether you're interested in robotics, engineering, or are just looking to make your sets a bit more advanced, LEGO Power functions are a great way to add some extra dynamism to your builds! ... LEGO System A/S, DK-7190 Billund, Denmark. Must be 18 years or ...

The LEGO Power Functions IR RC system operates on 4 different channels enabling you to control 4 different models at the same time. Use 8885 IR Remote Control or 8879 IR Speed Remote control to control functions on the IR Receiver! The reaching distance of the infra-red RC system is at least 30" (10m).

The previously used LEGO Power Functions system is going to be fully replaced by LEGO Powered Up. It is still used in some of the currently available LEGO Creator Expert sets and some LEGO Technic models, and the parts will be available until the end of 2020. Exceptions to this is the #8878 LEGO Power Functions Rechargeable Battery Box which ...

Fx Track is new system of L-Gauge metal train track compatible with LEGO® brand 9V and RC track elements. Experience all of the advantages of running LEGO® model trains on metal rails, including limitless power without batteries, reliable smooth running and more options for control. The Fx Track system offers both the

This cable is only compatible with the newer LEGO Powered Up system (power functions 2.0 and not the older LEGO Power Functions system) Remote control Light My Bricks lights using the powered up controller together with the power functions motor (connecting using the provided socket on the cable) or separately (by

connecting into a separate ...

Switching to battery power meant I no longer had to go to the hassle of wiring my show layout, I could use stronger motors to pull heavier/longer trains, and because I switched to 8-wide at the same time that I switched power systems, I could more easily take advantage of third-party offerings such as bearing wheelsets.

Power Functions is a TECHNIC electric building system that consists of remote control units, power units, motors, lights and receivers that can be connected by cables with brick-shaped connectors. The core battery boxes deliver the power to different types of motors to make things move, light, remote control and even connection to a computer.

Power Functions (abbreviated as PF) is a system of electronic components, including motors, lights, remote control units and receivers or different power units. These parts can be connected by cables with brick-shaped connectors. The system is the successor to the 9V system and was first released in June 2007, in the sets 4957 Ferris Wheel, 4958 Monster Dino and 8275 ...

The console comes with a buildable retro TV, featuring a flat 8-bit Mario figure on the scrolling screen, plus an action brick to scan with LEGO Mario (figure not included; find in the LEGO Super Mario Starter Course set - 71360) so he reacts to the on-screen enemies, obstacles and power-ups just like in the Super Mario Bros. game. Creative fun!

Up to 8% cash back! Give your sets some power, and take them to the next level! Whether you're interested in robotics, engineering, or are just looking to make your sets a bit more ...

Whether you plan to upgrade to the LEGO Powered Up system, or stay with the LEGO Power Functions 1.0 system, it is great to see that LEGO is making the different components available individually. This way, you can get the exact parts you need without having to invest in whole sets. If you do want to stay with the original LEGO Power Functions ...

Keep LEGO things simple and reliable. Our Power Functions to Powered Up Adapter converts the LEGO Power Functions system to the Powered Up system (LEGO Boost, LEGO WeDo, LEGO Spike, LEGO Control+).
