

Lithium battery mobility scooters

Why should you buy a lithium battery for a mobility scooter?

With lithium technology, you'll charge your batteries faster, achieve longer battery life, and experience greater reliability from one of Pride's most popular mobility scooter lineups. Lithium batteries, the same technology used to power your smartphone and electric vehicles, pack more power into smaller, lighter units.

Are sealed-lead-acid batteries the future for mobility scooters?

In simple terms, Lithium batteries are the future, and sealed-lead-acid batteries are soon to be antiquated for mobility scooters. We'll get into the more specific details and explain why. Please note that not all lithium batteries are TSA-compliant.

What kind of battery does a mobility scooter use?

It's worth noting that most mobility scooters come with GEL batteries that are still considered sealed lead-acid. Others often come with AGM-style SLA batteries, but again, all of those are considered SLA and cannot compare with the performance of a Lithium Chemistry battery.

What makes a Go-Go endurance Li mobility scooter a good choice?

Battery performance defines the Go-Go Endurance Li Mobility Scooter. With lithium technology, you'll charge your batteries faster, achieve longer battery life, and experience greater reliability from one of Pride's most popular mobility scooter lineups.

Should I buy a SLA battery for my mobility scooter?

The only reason why you would want to stick with a traditional SLA battery is due to cost. SLA batteries are heavy, they discharge faster, and only last about 2 years in states that are humid and hot. It's worth noting that most mobility scooters come with GEL batteries that are still considered sealed lead-acid.

Which mobility scooter is best?

The Pride Go-Go Elite Traveller 4-Wheel mobility scooter takes the top spot with its combination of versatility, stability, and power. Built for the rider's comfort, this scooter has a cozy seat and a spacious deck, making sure you get a comfortable ride no matter how long you're using it.

Nearly all Pride Mobility scooters use a sealed lead acid (SLA) battery, save for the few models that use lithium-ion batteries. SLA is a blanket term that is best understood through history. Lead acid batteries were first developed in 1859 and the technology is still used in three kinds of modern batteries: flooded, absorbent glass mat (AGM ...

One of the most notable benefits of upgrading your mobility scooter or power wheelchair with Dakota Lithium batteries is the substantial increase in travel range. Compared to standard SLAs, Dakota batteries offer 2 to 3 times more distance. The most popular mobility scooters have a travel range of around 8-10 miles per charge.
