Can lithium-ion batteries be connected in parallel or in series?

Connecting lithium-ion batteries in parallel or in series is not as straightforward as a simple series-parallel connection of circuits. To ensure the safety of both the batteries and the individual handling them, several important factors should be taken into consideration.

What is a series-parallel battery connection?

Series-parallel. That doesn't mean you wire your batteries in both series and parallel. That would short your battery system! A series-parallel connection is when you wire several batteries in series. Then, you create a parallel connection to another set of batteries in series. By doing this, you can increase both voltage and capacity.

What is the difference between a parallel connection and a 12V battery?

For example, connecting four 12V batteries in series results in a 48V output. In contrast, a parallel connection boosts the overall capacity of the battery pack but maintains the voltage output at the level of a single cell or battery. Capacity: Parallel connections of LiFePO₄ batteries enhance the total capacity of the battery pack.

Do parallel connections increase the capacity of LiFePO₄ batteries?

Capacity: Parallel connections of LiFePO₄ batteries enhance the total capacity of the battery pack. For instance, connecting four 100Ah batteries in parallel results in a total capacity of 400Ah. Conversely, series connections do not increase the overall capacity; they only increase the voltage output.

Can I connect my batteries in series or parallel?

You can connect your batteries in either of the following: Series connection results in voltages adding and amperage remaining the same while parallel connection results in amperages adding and voltages remaining the same. Series-parallel connection results in both voltage and amperage adding.

How many lithium batteries can be connected in series?

For instance, LiTime allows for a maximum of four 12V lithium batteries to be connected in series, resulting in a 48-volt system. It's always important to consult the battery manufacturer to ensure that you stay within their recommended limits for series connections.
