

The Photovoltaic-energy storage-integrated Charging Station (PV-ES-I CS) is a facility that integrates PV power generation, battery storage, and EV charging capabilities (as shown in Fig. 1 A). By installing solar panels, solar energy is converted into electricity and stored in batteries, which is then used to charge EVs when needed.

This paper studies the coordinated reactive power control strategy of the combined system of new energy plant and energy storage station. Firstly, a multi time scale model of reactive power voltage control for energy storage power station and flexible new energy connected to AC/DC hybrid power grid is established.

22 pumped storage sites in the planning work, the total installed capacity was 29.70GW. As of the end of 2019, the planning work of the pumped storage power stations in 25 provinces were carried
