Why is energy storage important?

Energy storage is a potential substitute for, or complement to, almost every aspect of a power system, including generation, transmission, and demand flexibility. Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible.

Why should we invest in energy storage technologies?

Investing in research and development for better energy storage technologies is essential to reduce our reliance on fossil fuels, reduce emissions, and create a more resilient energy system. Energy storage technologies will be crucial in building a safe energy future if the correct investments are made.

How can energy storage systems improve the lifespan and power output?

Enhancing the lifespan and power output of energy storage systems should be the main emphasis of research. The focus of current energy storage system trends is on enhancing current technologies to boost their effectiveness, lower prices, and expand their flexibility to various applications.

Why is energy storage important for fossil fuel powered power plants?

With the installation of modern and more efficient devices of energy storage, the fossil fuel operated power plants can become more flexible and successful to manage rapid changes in demands of customers because now most of these could be equipped with reliable back-up power in the form of stored energy.

Why do we need a co-optimized energy storage system?

The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical tools to reliably and efficiently plan, operate, and regulate power systems of the future.

How does energy storage affect a power plant's competitiveness?

With energy storage, the plant can provide CO<sub>2</sub> continuously while allowing the power to be provided to the grid when needed. In short, energy storage can have a significant impact on the unit's competitiveness.
